REPORT - WEBINAR ON

“An Overview of Food Safety Management System and International Best Practices”

DATE: 29th January 2022

BACKGROUND & OBJECTIVE:

Department of Chemistry, School of Arts and Science, AV Campus, VMRF (DU) organized a Webinar on *“AN OVERVIEW OF FOOD SAFETY MANAGEMENT SYSTEM AND INTERNATIONAL BEST PRACTICES”* for Faculty members, Students & Industrial persons on 29.01.2022. Resource person of the webinar was .

The ultimate objectives of this webinar are

- The food safety system is to prevent illnesses by focusing food-manufacturing attention and activities on preventing or minimizing exposure of the consumer to pathogens.
- Implementing the FSO concept employs quantitative microbial risk assessment techniques, including modeling of the entire farm-to-table food supply chain (i.e., production, processing, distribution, marketing, and preparation),
- The consideration of the variation that occurs with the ingredients, process steps, distribution, and final food preparation.
- The risk assessment can organize the data to determine whether the food will consistently meet regulatory and public health targets.
- The risk assessment techniques can be used to determine the effects of changes in the supply chain, thereby helping in the design of appropriate food safety systems.
